THE ULTIMATE FLOORING PROTECTION

CONCRETE PROTECTION

Protectapeel Floordefend is a breathable, composite floor protection system that bonds temporarily to polished or smooth concrete. This seamless, UV- and weather-resistant covering is purpose-built to safeguard concrete floors through every stage of construction.

Protection should be installed after the slab is poured and before framing begins. When decorative or polished concrete is specified, Protectapeel Floordefend delivers the ideal protection.

For general contractors, keeping polished concrete safe during construction is a major challenge. From the moment the slab is poured, trades and laborers risk leaving scratches, gouges, oil stains, and markings as they work directly on the surface. Protectapeel Floordefend ensures concrete remains protected so it can meet the client's expectations at handover.

PEEL TO REMOVE

Protectapeel Floordefend is a glue-down protection system that prevents debris, spills, and construction damage from reaching concrete surfaces. It shields against abrasion, staining, scratching, oil, acids, water, welding splatter, rust, impact, and weathering. UV stable for 24 months, it's certified antimicrobial (ISO 20743) and antifungal (ASTM G21), so crews can frame directly on top.

Applied as an adhesive-fabric composite, Floordefend dries tack-free in about 2 hours and cures in 12 hours for heavy traffic. Installation is simple—just one or two people, no special training, and no reapplication like cardboard or films.

Early use saves time and money: protect concrete as soon as 10 days after pouring, polish before walls are up, and eliminate edging and rework. This speeds schedules, reduces costs, and improves finish quality.

Designed for safety, Floordefend meets NFS/ANSI slip-resistance standards. Its glued seams create a seamless, high-traction surface that won't shift, slip, or cause trip hazards.

The adhesive won't stain or discolor concrete and peels away cleanly, leaving surfaces ready for stains, densifiers, guards, or sealers. It also meets Class 1 fire and flame retardant standards (ASTM E648, NFPA 253).

Created by polished concrete contractors, Floordefend gives general contractors affordable, reliable protection through every stage of construction—comparable in cost to cardboard, but far more effective. At project completion, simply peel it away to reveal a clean, damage-free floor.

✓ GLUE DOWN PROTECTION

✓ AFFORDABLE

✓ FIRE RESISTANT

✓ UV & WEATHER RESISTANT

✓ DURBALE

✓ FAST REMOVAL
